

# GitHub Pull Summary - January 8, 2026

---

## ✅ Successfully Pulled Latest Code

---

### New Commits Pulled (7 commits):

1. **Fix TypeScript error: Handle optional content field in article detail page** (9e07580)
    - Made `content` field optional in article detail page handling
  2. **Fix TypeScript error: Add description field to StrapiArticle interface** (16a20b7)
    - Added `description` field to the article interface
  3. **Fix build error: Add null checks for Strapi article attributes** (e66bf4d)
    - Enhanced error handling with null checks
  4. **Update Strapi integration to new Strapi Cloud URL** (812f6b5) ⚠️ **IMPORTANT**
    - Migrated from Railway to Strapi Cloud
    - **New URL:** `https://usable-purpose-b78d93dac8.strapiapp.com`
    - Updated all hardcoded URLs to use `getStrapiImageUrl()` function
  5. **Add Strapi integration verification - all tests passed** (618afcd)
    - Verified Strapi API connection and authentication
  6. **Update Strapi diagnosis: Token is invalid/expired, needs regeneration** (8501b96)
  7. **Add Strapi connection error diagnosis and fix** (8b41119)
- 

## ⚠️ CRITICAL: Strapi Instance Migration

---

### What Changed:

- **Old Instance:** Railway ( `https://strapi-app-production-77b3.up.railway.app` )
- **New Instance:** Strapi Cloud ( `https://usable-purpose-b78d93dac8.strapiapp.com` )

### Local Environment Updated:

✅ `NEXT_PUBLIC_STRAPI_API_URL` → `https://usable-purpose-b78d93dac8.strapiapp.com`

### ⚠️ Token Status:

#### ❌ Current token is INVALID for the new Strapi Cloud instance

- The token we created earlier was for the Railway instance
  - It returns `401 Unauthorized` when used with Strapi Cloud
  - **Action required:** Obtain the Strapi Cloud API token
-

## What You Need to Do:

---

### Option 1: Get Existing Strapi Cloud Token

If you have access to the Strapi Cloud admin panel:

1. Login to: `https://usable-purpose-b78d93dac8.strapiapp.com/admin`
2. Go to: Settings → API Tokens
3. Find the existing token (might be named “Pet Jet Website API Token” or similar)
4. Copy the token value

### Option 2: Create New Token

If you need to create a new token:

1. Login to Strapi Cloud admin panel
2. Navigate to: Settings → API Tokens → Create new API Token
3. Set:
  - Name: “Pet Jet Website API Token”
  - Token type: “Read-only”
  - Token duration: “Unlimited”
4. Save and copy the generated token

### Update Environment Variables:

Once you have the token:

#### Local Development:

```
# I can update this for you - just provide the token
NEXT_PUBLIC_STRAPI_API_TOKEN=<your-new-token>
```

#### Vercel Production:

1. Go to: `https://vercel.com/dashboard`
  2. Select: Pet Jet project
  3. Navigate to: Settings → Environment Variables
  4. Update:
    - `NEXT_PUBLIC_STRAPI_API_URL` = `https://usable-purpose-b78d93dac8.strapiapp.com`
    - `NEXT_PUBLIC_STRAPI_API_TOKEN` = `<your-new-token>`
  5. Redeploy
- 

### Current Status:

---

-  Code pulled successfully (7 new commits)
  -  TypeScript errors fixed
  -  Strapi URL updated to Strapi Cloud
  -  **Waiting for Strapi Cloud API token**
- 

### Files Changed:

---

- `nextjs_space/lib/strapi.ts` - Updated to Strapi Cloud URL

- `nextjs_space/app/insights/page.tsx` - Fixed TypeScript errors and URL handling
  - Type definitions improved with optional fields
  - Error handling enhanced
- 

**Next Step:** Please provide the Strapi Cloud API token so I can update the local environment and test the integration.
