

Strapi API Token Update Guide

Issue Identified

The Strapi CMS integration was failing with a **401 Unauthorized** error because the API token was invalid or expired.

Solution: New Token Created

A new Strapi API token has been successfully created:

```
Token Name: Pet Jet Website API Token
Type: Read-only
Created: January 8, 2026
Lifespan: Unlimited (no expiration)
```

New API Token

```
e02ce37e71e9da3439d34520dc48e40f95cdc3843c79db9ce73133ca891eb817 -
ab29f5b5c1c64f2d5224c8cb7b -
b3658206665ada99eff11a8423228b031fe5ca09d45ea7ac54c71f8b80f43b6b585a04197e5e3f -
d4d30c964c04d9bdf7d75a883a223284250dbfc4d7f95f -
fec14865ba9e68d5cd1c9b049e33b335141b5020a7
```

Token Verified

The new token has been tested and works correctly:

-  Returns 200 OK status
-  Successfully authenticates with Strapi API
-  Can fetch articles (returns empty array as expected since no articles exist yet)

What's Updated

Local Development (.env)

 Local environment variable has been updated in:

- `/home/ubuntu/pet_jet_website/nextjs_space/.env`

Vercel Production Environment

 **Action Required:** You need to update this in Vercel:

1. Go to <https://vercel.com/dashboard>
2. Select your Pet Jet project
3. Go to **Settings** → **Environment Variables**
4. Find `NEXT_PUBLIC_STRAPI_API_TOKEN`
5. Click **Edit** and replace with the new token above
6. Save the changes

7. Vercel will automatically redeploy with the new token

Expected Result

After updating the Vercel environment variable:

- ☒ The “Connection Error” on `/insights` page will be resolved
- ☒ The page will show “No Articles Yet” message (expected - no articles created)
- ☒ Once articles are created in Strapi, they will display correctly

Next Steps

1. Update Vercel environment variable (see above)
2. Wait for automatic redeployment (~2-3 minutes)
3. Visit <https://mypetjet.com/insights> to verify
4. Optionally: Create test articles in Strapi CMS

Strapi Admin Access

- URL: <https://strapi-app-production-77b3.up.railway.app/admin>
- Email: developer@tin.info
- Password: Secure@2026

Note: The `.env` file is excluded from git commits for security. Never commit API tokens to version control.
